

VAC PACK

The Vac Pack is a portable, vacuum power pack which can convert any suitable container into a powerful vacuum recovery system. Unlike conventional vacuum pumps, the Vac Pack utilises a compressed air driven jet pump to create a high suction airflow of 17m³ (600CFM) and a vacuum of 0.85bar (25"HG).

The Vac Pack used in a vacuum recovery system can convey solids, sludges and liquids at rates in excess of 10m³ (2200 gallons per hour) with suction distances of over 100m horizontally and up to 30m vertically.

- » Portable and quick to set up.
- » High vacuum and airflow enabling recovery of waste materials from inaccessible areas.
- » Flexible multi-use application.
- » No moving parts.
- » Intrinsically safe.
- » Optional remote control for convenient operation.

The Vac Pack is available for hire or sale with a variety of interceptor options.
